

**THANK YOU for choosing the N-audio Magnetic Pole Detector, and welcome to the N-audio family!**

## **USER MANUAL**

The N-Audio Magnetic Pole Finder is a valuable tool for luthiers, guitar pickup builders, and anyone involved in electronic guitar repairs. This simple device can detect both the north and south poles of any magnet. Just position its sensor tip near the guitar pickup, and an LED will indicate the magnet's polarity.

When you get the detector, install a new CR2032 battery as shown (1). To use it, place a magnet it under the sensor tip (2). The LEDs will show you the magnetic pole.

### **SPECIFICATIONS:**

- Minimum magnetic flux detection: 20 Gauss /2 mT/
- Idle current draw: 4uA
- Device dimensions: 10 x 2 cm
- Works with CR2016, CR2020, CR2025, and CR2032  
Recommended cell battery: CR2032
- Battery not included.
- Packaging: Metal box
