

Identifying the phase of a guitar pickups and the phase of an unknown pickup using the N-audio guitar pickup phase tester

- 1 Connect the guitar and the pickup phase tester via a guitar MONO cable. Increase the volume and the tone and tap to one of the pickups with a cutter blade to see the phase.

A guitar with normal phase pickups

A guitar with reversed phase pickups

- 2 Connect a guitar MONO cable to the tester. Connect one wire of an unknown pickup to the ground and the other one to the Tip. Tap to see the current phase. Match the phases of the guitar and the new pickup by soldering the wires based on the right phase.
